CONTENTS

The Preferential Utilization of Different Forms of Inorganic Nitrogen in the Decomposition of Plant Materials. E. H. RICHARDS AND J. G. SHRIKHANDE.....	1
Relative Amounts of Calcium Carbonate and Magnesium Carbonate in Some Minnesota Subsoils. F. J. ALWAY AND JEAN M. ZETTERBERG.....	9
Toxicity of Manganese to Turkish Tobacco in Acid Kentucky Soils. C. E. BORTNER.....	15
Mineral Constituents in Relation to Chlorosis of Orange Leaves. N. H. PARBERRY.....	35
Carbon Dioxide Production by Mannite-Treated Soils as a Means of Determining Crop Response to Fertilizers. W. B. ANDREWS.....	47
The Factors Which Influence the Use of the Conductivity of Soil Suspensions as a Measure of Fertility. M. S. DU TOIT AND I. S. PEROLD.....	59
The Laws of Soil Colloidal Behavior: XV. The Degradation and the Regeneration of the Soil Complex. SANTE MATTSON AND JACKSON B. HESTER.....	75
Effect of Sunlight on the Nitrification of Ammonium Salts in Soils. G. S. FRAPS AND A. J. STERGES.....	85
Characteristics of Certain Bacteria Belonging to the Autochthonous Microflora of Soil. H. J. CONN AND MARY A. DARROW.....	95
Inorganic Phosphate in Green Plant Tissue as a Measure of Phosphate Availability. H. D. CHAPMAN.....	111
Carbohydrate Supply as a Primary Factor in Legume Symbiosis. FRANKLIN E. ALLISON.....	123
A Response of Chlorotic Corn Plants to the Application of Zinc Sulfate to the Soil. R. M. BARNETTE AND J. D. WARNER.....	145
The Laws of Soil Colloidal Behavior: XVI. The Cation Exchange-Maximum in Alumino-Silicates. SANTE MATTSON AND J. S. CSIKY.....	161
Note on the Relation Between Lime Content and pH Values of Soils. STEPHEN KÜHN.....	167
A Note on the Relationship Between the Chemical Composition of Soil Colloids and Two of Their Properties. H. A. WADSWORTH.....	171
The Toxic Influence of Fluorine in Phosphatic Fertilizers on the Germination of Corn. H. HOWE NORSE.....	177
Isolation of Some Bacteria Which Oxidize Thiosulfate. ROBERT L. STARKEY.....	197
The Nomenclature of the Cowpea Group of Root-Nodule Bacteria. R. H. WALKER AND P. E. BROWN.....	221
A Comparative Study of the Bacterial Flora of Wind-Blown Soil: IV. Shackleford Bank, North Carolina. LAETITIA M. SNOW.....	227
A Comparative Study of the Bacterial Flora of Wind-Blown Soil: V. Monterey Peninsula, California. LAETITIA M. SNOW.....	233
The Amphoteric Nature of Three Coastal Plain Soils: I. In Relation to Plant Growth. JACKSON B. HESTER.....	237
The Amphoteric Nature of Three Coastal Plain Soils: II. In Relation to the Leaching and Absorption of Soil Constituents by Plants. JACKSON B. HESTER.....	247
Keijiro Aso. To Be Honored by Japanese Agricultural Societies.....	255
A New Instrument for Soil Sampling. AASULV LÖDDESÖL.....	257
The Ammonium Carbonate Method of Dispersing Soils for Mechanical Analysis. AMAR NATH PURI.....	263
A Simpler Method of Expressing the Mechanical Analysis of Many Common Soils. ROBERT L. JAMES.....	271

A Study of Phosphorus Penetration and Availability in Soils. LINDSEY A. BROWN.....	277
The Effect of Nitrate-Nitrogen on the Carbohydrate Metabolism of Inoculated Soybeans. F. S. ORCUTT AND P. W. WILSON.....	289
The Effect of Long and Short Day and Shading on Nodule Development and Composition of the Soybean. E. W. HOPKINS.....	297
Organization of the American Section of the International Society of Soil Science.....	323
Studies on Protein Synthesis by the Genus Azotobacter. ROBERT A. GREENE.....	327
Factors Influencing Phosphate Fixation in Soils. P. L. HIBBARD.....	337
The Determination of Absorbed Bases by Boiling with Ammonium Chloride and the Utility of the Procedure in Related Soil Investigations. W. M. SHAW AND W. H. MACINTIRE.....	359
Colloid Chemical Aspects of Clay Pan Formation in Soil Profiles. HANS JENNY AND GUY D. SMITH.....	377
Soil Profile Studies: VII. The Glei Process. J. S. JOFFE.....	391
Book Reviews.....	403
The Feeding Power of Plants for the Potassium in Feldspar, Exchangeable Form, and Dilute Solution. EDWARD H. TYNER.....	405
Tolerance of Certain Weeds and Grasses to Toxic Aluminum. BASIL E. GILBERT AND FREDERICK R. PEMBER.....	425
Rates of Absorption of Ammonium and Nitrate Nitrogen from Culture Solutions by Ten-Day-Old Tomato Seedlings at Two pH Levels. L. B. ARRINGTON AND J. W. SHIVE..	431
Apparatus for the Determination of CO ₂ in Culture Solution. L. B. ARRINGTON, C. H. WADLEIGH, AND J. W. SHIVE.....	437
The Relation of Potential Alkalinity to the Availability of Phosphate in Calcareous Soils. W. T. McGEORGE.....	443
Some Chemical and Physical Properties of Normal and Solonetz Soils and their Relation to Erosion. H. F. MURPHY AND H. A. DANIEL.....	453
The Separation and Identification of the Mineral Constituents of Colloidal Clays. MATTHEW DROSDOFF.....	463
Book Reviews.....	479

ILLUSTRATIONS

PLATES

TOXICITY OF MANGANESE TO TURKISH TOBACCO IN ACID KENTUCKY SOILS

Plate 1. Toxic Condition in Turkish Tobacco Plants 10 Days After Being Set; Considerable Chlorosis in Unlimed Soils; None in Limed Soils.....	25
Fig. 1. Berea soil.....	25
2. Greenville soil.....	25
3. Campbellsville soil.....	25
4. Mayfield soil.....	25
Plate 2. Severe Toxic Condition in Turkish Tobacco 49 Days After Being Set; No Toxicity in Limed Soils.....	27
Fig. 1. Berea soil.....	27
2. Greenville soil.....	27
Plate 3. Turkish Tobacco Plants, 49 Days After Being Set, Showing Comparative Size, Toxic Condition in Plants from Berea and Greenville Check Soils, and Recovery in the Campbellsville and Mayfield Unlimed Soils; No Toxicity in the Limed Soils.....	29
Fig. 1. Berea soil.....	29
2. Greenville soil.....	29
3. Campbellsville soil.....	29
4. Mayfield soil.....	29
Plate 4. Toxic Condition of Turkish Tobacco in Water Cultures Containing Manganese; Photographed 13 Days After Mn Additions.....	31
Fig. 1. Plants from Experiment 2.....	31
2. Plants from Experiment 3, showing effect of phosphorus in reducing manganese injury.....	31
Plate 5. Effect of Supplementary Phosphate Treatments in Overcoming the Toxic Condition in Turkish Tobacco Grown in Berea and Greenville Check Soils; Photographed 48 Days After the First Treatment Was Added.....	33
Fig. 1. Berea soil.....	33
2. Greenville soil.....	33

A RESPONSE OF CHLOROTIC CORN PLANTS TO THE APPLICATION OF ZINC SULFATE TO THE SOIL

Plate 1. Chlorosis of Corn.....	157
Fig. 1. Early symptoms of "white bud" in seedling of Whatley's Prolific corn..	157
2. Advanced stage of "white bud" in young Whatley's Prolific corn plant. Plants seldom recover from this stage.....	157
3. Chlorotic Long Island Beauty corn plant showing striping of leaves.....	157
4. Leaves of "white bud" corn plant compared with healthy.....	157
Plate 2. Effect of Zinc Sulfate in Combination with Mixed Inorganic Fertilizer and with Alkaline Peat on Development of the Corn Plant on Soil Areas Which Produce "White Bud" or Chlorotic Plants.....	159
Fig. 1. No treatment.....	159
2. Four hundred pounds per acre of an 8-8-4 mixed inorganic fertilizer made from nitrate of soda, superphosphate, and muriate of potash (in row).....	159

Fig. 3. Five tons per acre of alkaline peat in the furrow.....	159
4. Four hundred pounds per acre of an 8-8-4 mixed inorganic fertilizer and 20 pounds per acre of zinc sulfate (in row)	159
5. Five tons per acre of alkaline peat in the furrow with 20 pounds per acre of zinc sulfate.....	159

THE TOXIC INFLUENCE OF FLUORINE IN PHOSPHATIC FERTILIZERS ON THE GERMINATION OF CORN

Plate 1. Relation of Fertilizer Placement to Germination of Corn.....	195
---	-----

ISOLATION OF SOME BACTERIA WHICH OXIDIZE THIOSULFATE

Plate 1. Colony Development During 12 Days on Thiosulfate Agar.....	217
Fig. 1a. Culture B.....	217
2a. Culture T (<i>Th. trautweinii</i>).....	217
3a. Culture K (<i>Th. trautweinii</i>).....	217
4a. Culture A (<i>Th. novellus</i>).....	217
5a. Culture C (<i>Th. thioparus</i>).....	217
Photomicrographs of Cells From Thiosulfate Agar Cultures, 5 Days Old.....	217
Fig. 1b. Culture B.....	217
2b. Culture T (<i>Th. trautweinii</i>).....	217
3b. Culture K (<i>Th. trautweinii</i>).....	217
4b. Culture A (<i>Th. novellus</i>).....	217
5b. Culture C (<i>Th. thioparus</i>).....	217
6. Globules of sulfur from a colony of culture C developing upon thiosulfate agar.....	217
Plate 2. Colony Development During 5 Days on Nutrient Agar.....	219
Fig. 7. Culture B.....	219
8. Culture T (<i>Th. trautweinii</i>).....	219
9. Culture A (<i>Th. novellus</i>).....	219
10. Photomicrograph of <i>Th. thiooxidans</i> showing flagellation.....	219
11. a. Uninoculated thiosulfate solution medium.....	219
b. Thiosulfate solution medium supporting growth of culture C (<i>Th. thioparus</i>). General turbidity with sulfur precipitation in culture 7 days old.....	219
c. Thiosulfate solution medium supporting growth of culture A (<i>Th. novellus</i>). Uniformly turbid solution of culture 7 days old.....	219

THE AMPHOTERIC NATURE OF THREE COASTAL PLAIN SOILS: I. IN RELATION TO PLANT GROWTH

Plate 1. Effect of Soil Type, Reaction, and Organic Matter Upon the Growth of Beets...	245
Fig. 1. Effect of soil type and reaction.....	245
2. Effect of soil type and organic matter (peat moss source of organic matter).....	245

KEIJIRO ASO

Keijiro Aso.....	frontispiece
------------------	--------------

A NEW INSTRUMENT FOR SOIL SAMPLING

Plate 1. The Complete Soil Sampler.....	261
---	-----

THE EFFECT OF LONG AND SHORT DAY AND SHADING ON NODULE DEVELOPMENT AND COMPOSITION OF THE SOYBEAN

- Plate 1. Fig. 1. Tops and roots of plants from Experiment 2 at time of third harvest, plants 77 days old. Long day plants, left; short day plants, right..... 321
2. Tops and roots of plants from Experiment 4 at time of second harvest, plants 77 days old. Tops, unshaded plants, left; shaded plants, right. Roots, shaded plants, left; unshaded plants, right..... 321

THE FEEDING POWER OF PLANTS FOR THE POTASSIUM IN FELDSPAR, EXCHANGEABLE FORM, AND DILUTE SOLUTION

- Plate 1. Growth of Sweet Clover and Sudan Grass with Various Potassium Treatments.. 423
- Fig. 1. Growth of sweet clover with the potassium treatments indicated. Jar 1, 100 pounds per acre soluble potassium; jar 2, 2 tons per acre feldspar; jar 3, no potassium..... 423
2. Growth of sudan grass with potassium treatments indicated. Jar 1, 100 pounds soluble potassium per acre; jar 2, 100 pounds potassium per acre as saturated inorganic exchange material; jar 3, 100 pounds potassium per acre as half-saturated inorganic exchange material; jar 4, no potassium..... 423

TOLERANCE OF CERTAIN WEEDS AND GRASSES TO TOXIC ALUMINUM

- Plate 1. Effect of Aluminum on Common Chickweed (*Stellaria media*)..... 429

TEXT-FIGURES

RELATIVE AMOUNTS OF CALCIUM CARBONATE AND MAGNESIUM CARBONATE IN SOME MINNESOTA SUBSOILS

- Fig. 1. Map of Minnesota Showing Extent in the State of the Des Moines Lobe of the Last Glacial Ice Sheet, Directions of Ice Movement and Portion Covered by Lake Agassiz..... 12

CARBON DIOXIDE PRODUCTION BY MANNITE-TREATED SOILS AS A MEANS OF DETERMINING CROP RESPONSE TO FERTILIZERS

- Fig. 1. Response of Cotton and Soil Microorganisms to Nitrogen and to Nitrogen and Phosphorus—Mississippi Soils..... 52
2. Response of Cotton and Soil Microorganisms to Nitrogen and to Nitrogen and Phosphorus—Louisiana Soils..... 54

THE FACTORS WHICH INFLUENCE THE USE OF THE CONDUCTIVITY OF SOIL SUSPENSIONS AS A MEASURE OF FERTILITY

- Fig. 1. Contributing Factors in "7 Days Increase"..... 64
2. Conductivity Increase Due to Hydrolysis..... 69
3. Relation Between Dispersion and Conductivity Increase..... 70

CARBOHYDRATE SUPPLY AS A PRIMARY FACTOR IN LEGUME SYMBIOSIS

- Fig. 1. Carbohydrate Utilization in Legumes as a Function of Amount Synthesized..... 125

THE LAWS OF SOIL COLLOIDAL BEHAVIOR: XVI. THE CATION EXCHANGE-MAXIMUM IN ALUMINO-SILICATES

- Fig. 39. The Cation Exchange-Maximum in Precipitated Alumino- and Ferric-Silicates. 163

NOTE ON THE RELATION BETWEEN LIME CONTENT AND pH VALUES OF SOILS	
Fig. 1. Relation Between pH Values and Average pH Differences.....	168
A NOTE ON THE RELATIONSHIP BETWEEN THE CHEMICAL COMPOSITION OF SOIL COLLOIDS AND TWO OF THEIR PROPERTIES	
Fig. 1. Relation Between the Moisture Equivalents of Soils and the Percentages of Colloidal Materials.....	172
THE TOXIC INFLUENCE OF FLUORINE IN PHOSPHATIC FERTILIZERS ON THE GERMINATION OF CORN	
Fig. 1. Percentage Increase in Weight of Corn Seeds Planted in Moist Fertilizer.....	180
A NEW INSTRUMENT FOR SOIL SAMPLING	
Figs. 1, 2, and 3. Diagrams Showing the Construction of the Soil Sampler.....	258
A SIMPLER METHOD OF EXPRESSING THE MECHANICAL ANALYSIS OF MANY COMMON SOILS	
Fig. 1. Some Typical Lines for Soils When Logarithm of Time of Hydrometer Reading is Plotted Against Logarithm of Hydrometer Reading.....	272
A STUDY OF PHOSPHORUS PENETRATION AND AVAILABILITY IN SOILS	
Fig. 1. Percolation Tube Setup Used in Laboratory Penetration Tests.....	282
THE EFFECT OF NITRATE-NITROGEN ON THE CARBOHYDRATE METABOLISM OF INOCULATED SOYBEANS	
Fig. 1. Comparison of Nitrate in the Sap to Nitrate Added.....	291
2. Effect of Nitrate on Glucose Content of Plant Sap.....	292
3. Sucrose Content of Plant Sap After Nitrate Additions Have Ceased.....	293
4. Effect of Nitrate on Soluble Sugar in Sap of Uninoculated Plants.....	294
THE EFFECT OF LONG AND SHORT DAY AND SHADING ON NODULE DEVELOPMENT AND COMPOSITION OF THE SOYBEAN	
Fig. 1. Experiment 1. Carbohydrate and Nitrogen Composition, Wet Basis, of Soybeans Grown in Long and Short Day. Plus Nitrate. Plants 47 Days Old.....	309
2. Experiment 2. Carbohydrate Composition, Wet Basis, of Soybeans Grown in Long and Short Day. Minus Nitrogen. Plants of First Harvest 49 Days Old, of Third Harvest 77 Days Old.....	309
3. Experiment 3. Carbohydrate and Nitrogen Composition, Wet Basis, of Shaded and Unshaded Soybeans. Plus Nitrate. Plants of First Crop 37 Days Old, of Second Crop 43 Days Old.....	313
4. Experiment 4. Carbohydrate Composition, Wet Basis, of Shaded and Unshaded Soybeans. Minus Nitrogen. Plants of First Harvest 39 Days Old, of Second Harvest 77 Days Old.....	314
FACTORS INFLUENCING PHOSPHATE FIXATION IN SOILS	
Fig. 1. Fixation of PO_4 From Different Amounts Added to 100 gm. Soil.....	341
2. Change, During One Year, in PO_4 in 1:1 Water Extract of Soils to Which Was Added CaHPO_4	344
THE DETERMINATION OF ABSORBED BASES BY BOILING WITH AMMONIUM CHLORIDE AND THE UTILITY OF THE PROCEDURE IN RELATED SOIL INVESTIGATIONS	
Fig. 1. Disintegration of Limestone and of Dolomite by Boiling Normal Solutions of Ammonium Chloride, as Determined by Ammonia Distillations.....	360

COLLOID CHEMICAL ASPECTS OF CLAY PAN FORMATION IN SOIL PROFILES

Fig. 1. Accumulations of Clay Particles Less Than 1μ in Diameter in Various Horizons of a Well-Drained (A) and a Poorly Drained (B) Profile.....	378
2. The Sieve Action Principle of Clay Accumulation.....	380
3. Effect of Additions of CaCl_2 (Symmetry Concentrations) on the Rate of Pan Formation.....	383
4. Influence of the Valence of the Cation on the Rate of Pan Formation.....	384
5. Protective Action of Colloidal Humus Against Flocculation of Natural Clay Sol by NaCl	385
6. Repression of Pan Formation by Colloidal Humus.....	385
7. Formation of Attraction Pans with the Aid of Positive Iron Sols.....	386

THE FEEDING POWER OF PLANTS FOR THE POTASSIUM IN FELDSPAR, EXCHANGEABLE FORM, AND DILUTE SOLUTION

Fig. 1. Apparatus for Flowing Culture.....	411
2. Rate of Dialysis of Potassium from the Expressed Sap of Sweet Clover and Buckwheat Through a Collodion Membrane.....	418
3. Rate of Dialysis of Potassium from Sweet Clover Sap Compared to KCl Solutions Containing Equal Concentrations of Potassium, One With and One Without $\text{Fe}(\text{OH})_3$	420

APPARATUS FOR THE DETERMINATION OF CO_2 IN CULTURE SOLUTIONS

Fig. 1. Apparatus for the Determination of CO_2 in Culture Solution.....	439
---	-----

THE RELATION OF POTENTIAL ALKALINITY TO THE AVAILABILITY OF PHOSPHATE IN CALCAREOUS SOILS

Fig. 1. Descending Order of Solubility of Calcium Phosphates and Ascending Order of Solubility of Phosphates of Iron and Aluminum with Increase in pH.....	444
2. Relation Between pH and Parts Per Million of: 1. Sodium Carbonate; 2. Sodium Hydroxide; 3. Hydroxyl Ion.....	446
3. Effect of Varying the Soil-Water Ratio on pH of Soil Number 1.....	448
4. Effect of Varying the Soil-Water Ratio on pH of Soil Number 2.....	449
5. Effect of Varying the Soil-Water Ratio on pH of Soil Number 3.....	450
